

CLAIMS

What we claim is:

1. A compound having the structure:

wherein X is selected from the group consisting of: Na⁺, Li⁺ and K⁺.

2. A compound having the structure:

wherein X is selected from the group consisting of: 2 Na⁺, 2 H⁺, 2 Li⁺; 2 K⁺, Mg²⁺, Ca²⁺, Zn²⁺, piperazine, morpholine, imidazole, quinine and quinidine.

3. A compound having the structure:

wherein X is selected from the group consisting of: Na⁺, Li⁺ and K⁺.

4. A method for synthesizing the compound of claim 1, comprising phosphorylating phenpanstatin with tetrabutylammonium dihydrogen phosphate using dicyclohexylcarbodiimide in pyridine containing *p*-toluenesulfonic acid to form a pyridinium salt of 3,4-O-cyclic phosphate, and converting the pyridinium salt to said compound.

5. A method for synthesizing the compound of claim 2, comprising converting, by passing through an ion exchange column, a compound having the following structure

wherein X is selected from the group consisting of: Na^+ , Li^+ and K^+ , to form said compound.

6. A method for synthesizing the compound of claim 3, comprising phosphorylating pancratistatin with tetrabutylammonium dihydrogen phosphate using dicyclohexylcarbodiimide in pyridine to form a pyridinium salt of 3,4-O-cyclic phosphate, and converting the pyridinium salt to said compound.

Figure 1. An X-ray thermal ellipsoid plot (50 % probability) of sodium pancratistatin 4-O-phosphate (4a) as the dihydrate.
